Data Warehouse Training (Refresher)

When: **2-4 p.m. September 15**

Where: **Academic Technologies (SMITC Room 209)**

A data warehouse has been purchased and is being implemented by Boise State. Training is being conducted to advance an environment where data is readily available to support all decision making processes: strategic planning, resource allocation, process

reinvention, program review and accreditation. The first module implemented provides reports on student data.

The data warehouse environment will allow users to:

- Find, explore and filter student data to fit their needs
- Provide a single source of truth (i.e., everyone sees the same numbers when the same parameters are used)
- Obtain information quickly

The student data comes directly from the PeopleSoft system and is transformed for reporting use within the data warehouse. Data is refreshed each night so you will see the most current data through the end of the prior day.

This training provides a two-hour overview to student data available in the data warehouse and allows participants to practice finding and extracting data from it. There are two levels of training. One for users who have previously been trained but need a refresher course. The other is for users who are new to the data warehouse environment. Training is limited to those who need to report on student information.
