Students of Boise State University

Although this file was scanned from the highest-quality microfilm held by Boise State University, it reveals the limitations of the source microfilm. It is possible to perform a text search of much of this material; however, there are sections where the source microfilm was too faint or unreadable to allow for text scanning. For assistance with this collection of student newspapers, please contact Special Collections and Archives at archives@boisestate.edu.
Recent computer viruses and the omnipresence of cell phones and e-mail have prompted users and security officials to re-examine the fundamental principles of information security and privacy at Boise State University. Three principles identified by Boise State's Information Technology Department are confidentiality, integrity and availability.

Confidentiality - information is not made available or disclosed except to the persons or processes that are entitled to receive it. This is achieved through encryption and password protection.

Integrity - ensures information is not modified or altered intentionally or by accident. Whether data or program, this principle ensures that information is accurate and consistent.

Availability - information must be accessible to authorized persons when needed. This principle ensures that systems are available for use.

The University's Information Technology Department is working in cooperation with Boise State's Academic Senate to develop policies that ensure the privacy and security of information on campus. The three principles of confidentiality, integrity and availability are the foundation of the policies that are being developed.

The University, like many others, has had to consider the impact of new technologies on traditional policies. For example, the University's Academic Senate recently passed a policy that governs the use of university resources for personal purposes. The policy states that employees may use university resources for personal purposes only if it is consistent with the university's mission and does not interfere with the employee's duties. This policy is an example of how the University is adapting to new technologies to protect the privacy and security of information.

The University's Information Technology Department is also working with the University's Academic Senate to develop policies that govern the use of personal computing devices on campus. The policy states that employees may use personal computing devices on campus only if it is consistent with the University's mission and does not interfere with the employee's duties. This policy is an example of how the University is adapting to new technologies to protect the privacy and security of information.

The Arbiter
it really true?
sexes has become a common issue, Boise State's students enrolled in engineering courses are male. In fact, about 70 percent of all engineers are male. This is not just because I am a female I am trying to get my ideas to be taken place in this field, so I was encouraged to spend a month-long adventure on the expedition, Lyle had to write a research proposal. He was reviewed by international panels of 48 other scientists. Lyle job is to drill 200-300 meters into the crust of the ocean used to look. By doing this, the scientists bring us rain, which is definitely worth $6.00 a day. The team plans to drill 200-300 meters at a time, and then get jobs in the teaching staff. Although they are not used to it, "I was one male nursing student, who studies the ocean used to look. I am definitely worth it," said Lyle.

By Lyle's Leg 19, 2006, will be almost four days in June in order to do their study. Last year, he was chosen for the project, after climate changed, his lab "should be doing "tomorrow," he said. The team plans to drill 200-300 meters at a time, and then get jobs in the teaching staff. Although they are not used to it, "I was one male nursing student, who studies the ocean used to look. I am definitely worth it," said Lyle.

Electoral changes bring diversity to the city council

By Stephanie Barden

In earlier years, the seats of the Boise City Council were filled by popular vote to a representative who was open to anyone in the city limits, the council was not a representative of the population. The people vote equally represented on an equal basis of representation.

People may not be involved in the same issues, and the council members are open to anyone in the city limits, the council was not a representative of the population. The people vote equally represented on an equal basis of representation.

A Note from the News Editor

As previously mentioned, The Arbiter is featuring a weekly section of the paper devoted toward educating our readers on the city council elections. This section will include articles written by The Arbiter, Alvarez office, as well as interviews with candidates. To date, The Arbiter has interviewed 10 candidates for the city council elections. The next article in this series will be written by Jason Shaw, chair of the Greenbelt campaign.

The power of democracy is not new and begins with the idea of a representative government. It is a system of government in which the people elect representatives to govern on their behalf. In the United States, this system is based on the principle of majority rule. As citizens, we have the right to vote and to participate in the decision-making process. We can do this by voting in elections, writing to our elected officials, or attending city council meetings.

Table Rock: Still making me sick

Dear Editor,

This is my second year living in the Table Rock area, and I have been very impressed by the town’s efforts to maintain and enhance its beauty. The recent addition of the new sculpture garden has been particularly noteworthy.

However, I must voice my concern about the state of the main park area, which has been a source of pride for the community. Over the past few months, I have noticed a disturbing trend of litter and graffiti that has marred the park’s appearance.

I understand that maintaining the park is an ongoing effort, and I believe that the community should work together to address these issues. Perhaps a regular clean-up event could be organized, or residents could be encouraged to adopt specific areas of the park to keep them tidy.

I hope that the town council will take my concerns seriously and take actions to preserve the beauty of Table Rock for future generations.

Sincerely,
[Name]

Team kicks it in for UTEP 42-17 for first WAC win by Steve Ohlman The Arbiter

What's the difference between this year's Bronco team and last year's? Well, if you ask a UTEP fan, chances are he'll tell you how much more experienced this year's Miners are. Although the Miners were better last year, this year's team is more experienced and ready for a WAC win.

On Saturday, Boise State took the field after a two-week break. Although the team had time off, the football season is in full swing and Boise State was ready to take on the Miners. The Miners entered the game with a 2-0 record, but many doubters thought Boise State could win.

The Broncos started fast, scoring in the third minute. Boise State continued to strive and play-stopping ability in the first half. The defense, which was limited to only a field goal after reaching BSU's 9-yard line, was unable to make it to the end zone.

Half-time: Boise State leads 14-10.

Boise State launched a ground game from the start. The offense was led by Dinwiddie, who attempted only 10 passes. Dinwiddie passed to the Miners' 12-yard line, but Boise held the ball. Boise then took control of the game and started to score.

In the second half, Boise State scored again and took the lead by a 28-17 margin. The defense, which was complemented by the running game, dominated and made big plays and if this goes on, Boise State could go on to win the game.

With 13 minutes left in the third quarter, Boise State scored again, and the Miners found themselves down and unable to dominate the game. Boise State continued to score and hold the Miners scoreless.

In the fourth quarter, Montana was leading 28-17. The defense, which was complemented by the running game, dominated and made big plays and if this goes on, Boise State could go on to win the game.

Students focus through Aikido

Unlike Saturday, in their first game against the Miners, Montana found themselves faced with a tough opponent. The Miners, led by Coach Jean, fired the scoring shot from 12 yards out on a break away goal to clinch the victory.

The Montana offense revolved around the run and at times looked hesitant to pass, taking the ball to the Miners' 3-yard line and scoring on a 1-yard touchdown.

Boise State now resumes its season and will face the Miners again this weekend.

Soccer team drops two in California

Boise State's women's soccer team was without a win after two losses in the last two weeks. The team faced off against California University on Friday and Santa Clara University on Sunday.

On Friday, Boise State scored early and took the lead by a 2-0 margin. However, the Miners fought back and tied the game in the second half.

The Miners scored again in the 87th minute, giving them a 2-1 lead. However, Boise State fought back and scored in the 92nd minute to tie the game.

College students wonder about re drafting of policy

By James A. O'Neill

PHILADELPHIA - A new generation of students, now older and more politically aware, has grown up in the years since the Vietnam War. At colleges across the country, there is talk of the possibility of a new military draft, which many students fear will lead to an increase in violence on campus. They fear for friends in the military, they fear for their own safety.

But many students say they worry most about how the United States would respond to terrorist attacks. They fear for friends in the military, they fear for their own safety.

"We're afraid of war," said Jonah Eaton, 21, a senior at the University of Pennsylvania. "We're afraid of the U.S. military action." Adamany said "we cannot tol-

The students have mixed feelings about the possibility of a new military draft. They fear for their friends in the military, they fear for their own safety.

"I think it's a way of the future," said Peterson. "I think it's a way of life, a way of existence." Peterson said he is not afraid of the military, he is afraid of the consequences of a new military draft.

"I'm not afraid of the military," said Peterson. "I'm afraid of the consequences." Peterson said he is not afraid of the military, he is afraid of the consequences of a new military draft.
