River by Design marks 100 years since the Boise River emerged as an engineering sensation with the dedication of Arrowrock Dam. Sequenced like a tour with stops in Boise, Garden City, Eagle, Caldwell, and Parma, these essays collectively search for the politics and cultural values that drive engineering design.

“River by Design is an important, thoughtful book. It flows through past and present, wildness and civilization, to urban development issues confronting the new American West.”

– SCOT OLIVER, EXECUTIVE DIRECTOR, IDAHO SMART GROWTH
