Death Downwind
by Janice Pavlic

The cancers vary. Some have "blood cancers, lymphomas, or bone tumors. Others have tumors of the pancreas, lungs, brain, and two diseases we've never heard of; three out of five known cases of a rare cancer have victimized citizens of Orderville, Utah. Women have reproductive cancer, above average incidences of miscarriage, sterility, and defective births," said Janet Gordon, southern Utah director of Citizens' Call. The result of thyroid tests performed on children from Washington County have been requested from the Federal Government. "They have been told they can't have them because they are classified information," Gordon said.

They are the citizens that have been exposed to radioactive fallout during weapons testing at the Nevada Test Site near Las Vegas, people who live downwind in Nevada and Utah.

At a public presentation last Sunday, radiation victims from Citizens' Call and spokesman from Snake River Alliance - and the MX Information Center talked with citizens and students in BSU's Boisean Lounge. Speakers addressed the problems of the radiation victims, the nuclear arms race, the MX, and Idaho's connection with these issues. The presentation sponsored by Citizens' Call, Snake River Alliance of Boise and Magic Valley, and Nuclear Counterbalance of Pocatello was hosted by BSU student Action Committee.

Citizens' Call

Citizens' Call, an organization founded in 1979 in Salt Lake City, is "staffed by people who lived in the area hard hit by fallout from the Nevada Test Site (NTS) and who are either radiation victims themselves or have family members who are, according to a Citizens' Call brochure. "Citizens' Call was formed to fill the void of government interaction on behalf of the region's radiation victims and to help the victim meet needs and problems," the brochure continued. Janet Gordon and many other citizens watched the early tests at NTS because they were urged to by officials who did not inform them of the danger. In fact, they

Attitudes Toward War

The former president of the American Psychiatric Association says a "pathological mechanism of denial" is keeping Americans from thinking about the implications of nuclear war. And, says Dr. Judd Marmor, that is only one of several psychological factors that are increasing the probability of a catastrophic world war. People in all countries, he says, are being conditioned to accept the arms race, view their adversaries as totally evil and think of nuclear destruction in terms of "pathological mechanism of denial" is in both the U.S. and Russia "have been conditioned to accept the arms race, view their adversaries as totally evil and think of nuclear destruction in terms of "pathological mechanism of denial.""

Reagan Christmas

In case you haven't felt the delights of tomato juice. But real fans should head for Chemical and Engineering News has worked out some equivalents. For example, you can recreate Toronto's acid rain content by standing in a stream of lemon juice and battery acid. Chicago Tribune, Oct. 7.

Association of College Unions
International
By Marianne Flagg

The success of this weekend's Association of College Unions-International conference fueled the imagination of student government leaders and college union managers, giving them ideas and techniques for programming at their respective universities. Delegates were given the opportunity to hire nonacademic as well as coffeehouse performers for their universities. Billboard Health Sciences Senator Helen Holt assisted in obtaining a program on alcohol on campus and said she was "very pleased by the response of the people who attended the meeting." Holt, who has been active in the Alcohol Awareness Program at BSU, said that alcohol is not allowed on campuses in Idaho, schools in other states allow controlled alcohol use on campus. She said Washington State University in Pullman, Wash., issues special events permits for campus events such as dances and floor parties in dormitories. Next year's conference will take place at an ac-Ytenanted-motel-style inn in Oregon.

Fred Norman speaking at the ACUI conference about the success of the student union in Washington.

Delegates said one goal for BSU's student union in the next year will be the upgrading of the presentation of visual arts on campus. By the time the conference concluded, delegates were thinking that 1982 will be the year of the arts.

BSU delegates to the conference were Danny Freeburn, Steve Dingmann, Mike Heidmouth, Carole Gelder, Pat Donnelly, Gail Beamer, Lisa Jordan, Jan Rothman, Terri Waller, Terry Raffel, Cindy Draper, Robert Rounds, Deanna Gibb, Cindy Haas, Rob Finckard, Pat Hamilton, Bob Kearns, Sheila Keith, Bonnie Arner, Helen Holt, and Kathy Kasowskii.

Major Dick Eardley

Boise Mayor Dick Eardley has won re-election to his third four-year term. With 72 percent of the precincts reporting at 10 p.m. Tuesday evening, Eardley had 55 percent of the vote. Kelly Peace, 14 percent; Dan Burnette, 11 percent; Don Brumley, who had withdrawn from the race, 9 percent, and Jim Sorrell, one percent. Fred Kopke, Glass Sandler, and Ralph McAdams were re-elected to their posts on the Boise City Council. Mary Truett narrowed the challenger, Richard B. Smith, in the downtown redevelopment race. Peace said he was "humbled" by the victory and called the win a vote of popular support for the actions of his administration regarding the leadership of Boise and downtown redevelopement.

Jerry Rothman

by Janice Pavlic

Philosophical and spontaneous are adjectives that describe Jerry Rothman, guest artist for BSU's ceramics workshop held October 21-23 in the classroom/studio of ceramic instructor John Tashkara. Rothman might be popularly known for his zero shrink clay, but that is only one facet of this artist's works.

Rothman is the head of the ceramics program at California State University, Fullerton. His figurative sculpture "exaggerates the frame to the bones and muscles suggest active human, struggle for release. Another theme is presence, the awareness of sheer size," as Rothman is described in an interview by Lukman Gholag in the September 1981 issue of Ceramics Monthly.

Carolyn Heilbrun

by Janice Pavlic

Carolyn Heilbrun, author of academic detective, mysterious and feminist writings, spoke at the Boise Gallery of Art on October 22 for the Writers and Artists Series. She also worked with Peter Voulkos, a principle designer in Japan, working mainly in ceramics today. Rothman might be popularly known for his zero shrink clay, but that is only one facet of this artist's works.

Stinging In The Rain

She divested tips for writers on the mechanics of her writing. Addressing writer's block, Heilbrun said, "the subconscious is terribly clever. What you must do is nothing else," but write and disconnect the phone. Of her feminism, she said, now, "the way to alarm the political rights, you see new thing on you then you start to develop new ways of doing it." Thematicall Rothman works with "marriage, love, birth, relationships, life itself. These are what we are aware of the struggles women encountered as they first paved the way for female Rhodes Scholars, now academic life." Framed by the Rafael exhibit at the art gallery, Carolyn Heilbrun also attended Cross, entertained and informed her audience with very witty and cultured appeal.

The three day workshop was sponsored by fees from previous workshops and the support of a grant from the Idaho State Board of Education coordinated by Takekara. Each year ceramic students consign their own works that are sold at a 30 percent commission rate to earn money to bring in well-known ceramist for participatory workshops. The participants come from all over the northwest, but the majority are from central and southern Idaho, and from BSU's ceramic classes.

The three day workshop was sponsored by fees from previous workshops and the support of a grant from the Idaho State Board of Education coordinated by Takekara. The participants come from all over the northwest, but the majority are from central and southern Idaho, and from BSU's ceramic classes.

Students benefit by listening, learning and working with inspiring guest artists. They have ample time to ask technical questions and to meet and talk with some of the significant artists in the United States today.

UNIVERSITY NEWS • NOVEMBER 4-10 • PAGE 3
The only gnu that's fit to deliver to your door by an agent of the U.S. Government to boot. Allow Dr. Donoghue two weeks to demonstrate the ability to design and perform outstanding humanities research and translate that into an end product to share with others.

If you are interested in the program, a copy of the guidelines should be available for review at your campus Placement Office. If not, please write immediately to: Youthgrants Guidelines, Mail Stop 103-C, National Endowment for the Humanities, Washington, D.C. 20506.

Legislature
There are full-time and part-time internships available in the Idaho State Legislation for the Spring Semester of 1982. Any person interested in the Political Science Legislative Internship Program for the upcoming session of the Idaho Legislation, which begins in January, 1982, should contact Dr. Donoghue in the Department of Political Science. Dr. Donoghue's office is at 1275 Brady Street, telephone number 385-3391.

Europe
Boise State credit will be given to students who register for Spring, 1982 classes at Study Abroad campuses in London, Avignon, and Cologne. Registration deadline is Jan 1.

Youthgrants Program of the National Endowment for the Humanities is alive and well and will once again offer a limited number of awards to young people in their teens and twenties to pursue non-credit, out-of-the-classroom research projects in the humanities. The deadline for receipt of completed application forms is November 16, and funded projects begin the following May. Up to 75 grants will be awarded, offering as much as $5,000 for individuals, and a few group grants up to $10,000 ($15,000 for exceptional media projects). Youthgrants are intended primarily for those between 18 and 25 who have not yet completed academic or professional training but can demonstrate the ability to design and perform outstanding humanities research and translate that into an end product to share with others.

The University News is published weekly by the students of Boise State University. Contributions and advertising are solicited; the editors reserve all rights. Offices are located on the 2nd floor of the SUB. Hours 8:30 to 5:00 Monday through Friday. 385-1464.

SUBSCRIPTIONS

Dorothy Fox, Citizen's Call board-member and past resident of Las Vegas, which is 65 miles southeast of NTS, speaks of "a disillusionment that stirs a bitterness in our souls."

Fox no longer "trusts the people in the government and others that lied to the people downwind and those of St. George, people that the government treated as guinea pigs behind the face of patriotism."

Fox has infiltrating breast cancer. She was operated on in 1977 and the cancer is now in remission.

Her son was born in 1952. In 1956 he became ill and was diagnosed as having leukemia cells. Fox "put him in a hospital in Las Vegas, Nevada and was asked to forget about him."

"Baneberry was cited as releasing only a small amount of-offsite radiation," states Gordon. "But Baneberry was a minor accidental spillage."

Fox no longer "trusts the people in the government and others that lied to the public earlier, to the public's disaster. Discrepancies in testimony under oath about the nuclear weapon testing have also been discovered."

"Above ground tests total at least 28; underground tests totalled 440 since October 1980. Underground testing has not proven safe, however. "Leaking or venting has occurred with the underground testing, " states Gordon, "in 1970 an explosion named Baneberry leaked."

"Baneberry was cited as releasing only a small amount of off-site radiation," stated Gordon. However, later on, the public found out the AEC had duped them again, that the fallout levels were higher than AEC officials revealed.

Doctor Pendleton, of the University of Utah Radiological Health Department, had monitored Baneberry. He said, "There is no need for immediate panic or worry, but when thousands of people are breathing radioactive dust, there is reason for concern."

Citizens' Call points out that radiation has a cumulative effect. An informational brochure states, "The effects of radiation stay with the person exposed for the rest of his life. Any more doses the person may receive will only add to the radiation burden the person already has."

So, essentially, these people are walking time bombs. Every time they are exposed to radiation the potential of becoming malignant increases.

Citizens' Call also wants Great Britain banned from testing at NTS. Twelve announced British tests have occurred, the last being in December, 1980.

"Baneberry was cited as releasing only a small amount of off-site radiation," stated Gordon. However, later on, the public found out the AEC had duped them again, that the fallout levels were higher than AEC officials revealed.
Black Thursday

The BSU University News had printed a story by Mr. Ferday titled the "ASBSU In Reno." It seems that the student senate had allocated $383 for "some unknown" people from B.U. to go to the Nevada Reno game as a matter of P.R. My wife, Naomi, showed me the article and that started the whole thing.

October 29, 1981, 9:00 PM

We started to make some phone calls and learned what the article did not state; the $383 of student money which was originally allocated for by 15 people, was now going to be used by 7 people. First of all, who were the 7 people that were going on this escapade and what is using the student's money in such an improper manner? The second and most important question was what could be done, at this time of night, to put a stop to this misuse of funds? This is where the fun started.

We contacted the following senators to find out how they felt about this expenditure of student funds:

Don Baldwin - against the expenditure,

Kember Barnhill - against the expenditure,

Lisa Beverly - against the expenditure, Ted Ecker - willing to reduce expenditure,

Deanna Gribler - against the expenditure, and

Don Bivens - against the expenditure. However we were unable to contact the rest of the senators. The only thing left to do was bring up the student body, to tell the senators, who were right there, why did they not have the common decency to call a special meeting at 10:30 p.m.? Tony Lund, ASBSU President, and have him call a special meeting of the senate.

9:50 PM

Tony Lund could not be contacted at home so we searched by my wife and I at the S.U.B. and we were able to locate Tony in the pool room. I told Tony that 6 senators wanted him to call a special meeting of the senate in the morning so that everyone would discuss and stop the funding for the trip to Reno. Tony stated that he was leaving for Reno at 4:00 a.m. the next morning and he would not be able to call the meeting. Naomi suggested that if the 6 senators were able to meet in the senate offices by 10:30 p.m., would Tony call a meeting to order? Tony was very cooperative and said not a tree eye to eye that he would be willing to call a special meeting at that time.

10:00 PM - Back to the Phones! Many of these senators either had tests the morning and he would not be able to call the meeting. We informed Tony that Barnes, Tom Givin, Bob Irusta, Patrich and Barnes, Tom Givin, Bob Irusta, Patrich would be a little late because he was driving in from Nampa. We informed Tony that he was not going to call a meeting after all. If Tony Lund had the common decency to call a special meeting at 10:30 in the evening. This meeting was to reconsider the spending of student money on the Reno football trip. Many of these senators either had tests the next morning, or had to work all night long. One senator even came from Nampa.

We were not able to reach Senators Tod Barnes, Tom Givin, Bob Irusta, Patrich reported. Robert Barnhill, in from Nampa, Ted Ecker, Deanna Gribler, and Helen Holt. We replied that it would pose no problem.

10:45 PM

All but one senator had arrived. Tony put on his jacket and was preparing to leave the pool room. "Thank you for your dedication, Senators. I will be right back." Student Body President, Tony Lund, left.

Parking

The ad hoc Student Parking Committee of which I am a member, met on October 29, 1981 to discuss the current student parking situation. Now that the Mission Center is under construction there is even less space allocated for student parking. Therefore we are asking that the University administration relinquish 1,000 of the general parking spaces in the stadium area to be partitioned off for those who have student parking permits. We are requesting that this space be as close as possible to the Vo- Tech buildings, the Gym, and the Athletic Center.

Dr. Zippy, the Quality Assurance Program's chief assurance.

"Nonsense! You must be wrong. Let me just step back for a better-- Ai-yee!"

"Not to worry," said Dr. Zippy. "Take my word, we'll never find another. It's a perfect record." "A perfect record?" "Yes, please, and a cup, too, if you have one handy," I said. "I see by your clerical collar that you're a priest. That must be helpful in your work."

The Innocent Bystander

By Arthur Hoppe

The Pacific Gas & Electric Company blames failures in its "quality assurance program" for the recently discovered flaws in its Diablo Canyon nuclear plant on the California coast. "Where the fun starts" is this escapade and spending the student's money on the Reno football trip. Did Tony use funds from student funds and how are these people trying to get? Tony Lund stated that he was going to take a stand against what they were doing and come to a meeting after all.

Rashid's phone number: 385-1440. I would also like to thank those 6 senators who were willing to come to the S.U.B. on that night at 10:30 p.m. It shows that there are people who are willing to take a stand against what they think is improper.

Mr. Barnhill would be a little late and told him that the company's president, Barton W. Shakesford, assured the public.

And in case the public needs any more assurance than that, I personally called Dr. Jeo Zippy, the Quality Assurance Program's chief assurance.

"Pork Barrel Politics"

"It is one thing for the government to risk its health and safety of its own citizens by nuclear weapons testing in Nevada, but it's beyond belief to invite another nation to endanger American citizens with their nuclear tests, carried out on American soil," read's Citizens' Call pamphlet.

To an international use of NTS calls to mind the international applications of the MX, said Holmes, of the MX Information Center in Salt Lake City spoke about these missiles on Sunday.

Holmes' primary message was for citizens to gain greater control. "A better informed public would never stand for the MX," Holmes said. Members of the MX Information Center believe that the "MX program was for whatever strategic, economic, environmental, or moral reasons, unacceptable for the United States, and that it was a mistake for this country to make."

Encouraging the audience to take an active role, Holmes said, "The democratic American system works" as shown by the election of two new congressmen: "Put it in the hands of the bureaucracy."

"It's a threat to world peace. It's a threat to national security," said Holmes. "The MX is one of three American missiles that would be used to conduct a limited nuclear war."

"In August of 1980 the press leaked information about the MX's original cost and it's 459 by which President Carter had officially sanctioned new strategic options for building a limited nuclear war. They talked about a retrievable storage program, so if anything goes wrong with the MX missile, that will increase testing and fallout casualties," Holmes continued.

"The MX represents a critical juncture in the evolution of the arms race. I don't think there is an end to this," said Holmes. "The same missile systems that are being used to produce nuclear weapons are being used to test them again."

"This is the last of the threshold of nuclear war that affects, not only the United States, but the world," said Holmes. "The MX is one of the weapons that will be used in a limited nuclear war."

"The MX has always been a hot topic," Holmes said. "It is (theoretically) tailored for SALT II, but practically it didn't fit into the SALT II guidelines, it was not viable. It's pork barrel politics," an extension of the Military Industrial Complex."

The Homefront

The McNeil of Snake River Alliance (SRA) brought the NTS and MX issues closer to home when he spoke about parallels between Idaho National Engineering Laboratory (INEL) and the Nevada Test Site.

"Stann mentioned a couple of the things that the arms race has to do with Idaho. In materials processing at INEL, increased transportation on our highways and from Nevada. They were both begun in the early '60s, run by the same government agencies, they've both hired the same contractors. In many cases the same individuals and they both use us all-- same basic restraints over and over again that there's nothing to be worried about, there's no problem," said McNeil.

"Most Makoons are aware that we're dumping radioactive water into our aquifer, a lot of people are less aware of the 13 million curies that have been released into the atmosphere, which becomes part of our food chain," said McNeil.

McNeil is also concerned about the great quantities of waste that are being stored at INEL. Twenty-five percent of the military waste comes to Idaho, including about 59 percent of plutonium contained waste from Rocky Flats bomb trigger factory in Colorado."

"Sebastien McNeil's attempting to address the nuclear waste situation with a bill that he has now before the Senate," continued McNeil. "He said that the bill, to be voted on within 2-3 weeks, will be an opportunity for Idahoans to be directly involved with someone from their state that has a key legislative position."

McNeil said that as citizens, "we have the right and obligation to be involved in the decision-making processes." He urged the audience "to be skeptical, be active, be involved. These are questions we have to become involved with, they are survival issues."

McNeil favors the provision of McNeil's "bill about making the rate players pay for disposal of radioactive waste from commercial power plants, paying the cost, where it belongs. Also, he's talking about a retrievable storage program, if something doesn't go wrong, we pull it out and repackage it," McNeil continued.

"One very extraordinary thing I see in McNeil's bill is that he is attempting to take the decision-making away from the people, to put it into the hands of the bureaucracy."

This makes me very angry and frustrated. These decisions are not purely scientific, nor legislative decisions. They are really being granted by a computer malfunction. He advised. "It isn't enough. It's important that we take the reins and regain control of the government."

Initiate a dialogue with your representatives and senators and find out what's going on in Washington," advised Holmes. "We're at a point where our leaders are actually thinking of dragging it out with nuclear weapons. They are..."
For the Week of November 5-11

Paul Politi, director of the Brigham Young University annual summer piano festival and the Gina Bachauer International Piano Competition, will perform in a joint recital with BSU pianist Madeleine Hsu Monday, Nov. 9 at 11:00 a.m. in the Music Auditorium. Admission for adults is $2.50 and for students, $1.50.

Paul Politi has performed recitals in many states, as well as Canada, Europe, and Japan.

Tuesday nights at 7:30 the Boise gallery of Art offers live dancing in the Gallery 5. The sessions last for 2 hours.

The Bogus Basin Ski Racing Alliance will hold a Ski and Winter Sports Show this weekend, Nov. 8-9, at the Western Idaho Fairgrounds. Along with skiing and snowboarding demonstrations, there will be a ski equipment sale, a National Ski Patrol display, and a variety of lively entertainment, including a ski jump.

Tuba Festa: "Edwin Whitworth, Winner", the story of a woman's maturation from adolescence to middle age, is "a special documentary, "Vietnam Veterans: A Matter of Life and Death Special" documentary, of the effects of the Vietnam War on the men who fought and their families. Wed., Nov. 11, KBAI, 9pm.
The critical acclaim and commercial success of John Irving's last novel, The World According to Garp, threw Irving into the unenviable position of having to compare with himself. How does one top a work that is thrilling and imaginative as Garp? One can marry the gloom of Melville to the epic absurdity of Voltaire and do the whole thing with enough Sam Peckinpah violence to delineate even the most jaded reader. Irving has done this in his new novel, which is equally a work of empathy and of thrills, with mixed results.

Irving's vivid, crowded imagination and charming, fluid prose style are his chief gifts as a writer. Unfortunately, his unusual imaginings often work counter to his purposes. Please hang onto your Yalilum while I attempt to deliver a cursory account of the goings-on at the Hotel New Hampshire.

Patriarch Winslow Berry buys a motorcycle-riding bear named Eiel from a Vietnamese Jew named Frazz (no, not that Frazz). He decides to start a hotel in his hometown of Daisy, N.H., calling it, naturally, the Hotel New Hampshire. He eventually packs up his eccentric family and buys a hotel in Vienna, the second Hotel New Hampshire. The hotel is populated by prostitutes and bomb-building terrorists. The brothel's bouncer is an ugly lesbian rape victim who wears a bear suit. You will no doubt agree with Win Berry that this is the ideal place to bring your children. If the Berry children were strange in New Hampshire, they reach new heights of dementia in Vienna.

As for the family members, Mother Berry and the youngest boy, Egg, are quickly and horrifically dispatched by Irving in the earliest entry. John Scobble Child, is insanely involved with his sister Fanny, who is herself gang-raped at the age of 15 by New Hampshire preppies. The eldest Berry, Frank, is a cynical homosexual, and the youngest girl, Lili, is a dwarf who would be Emily Dickinson. Are you still with me?

In this, all the women in Winslow's sphere, from prostitutes to lesbians, commit suicide, or suffer under other ignominious conditions. The men are emotionally and often sexually repressed, are blind, smite, or living in some torturous personal hell. Forgive me if I fail to see the connection between this and your desire to know something about the goings-on at the Hotel New Hampshire.

The grim fairy tale Irving has constructed literally steals the reader's breath away. So endless and faceless is the litany of despair that one barely has the strength to assimilate the point Irving is trying to make with all of this. About the time I encountered the lesbian in the bear suit (her name is Susie, if you care to know), I longed for a dull, semi-normal character to hang my confusion on. No character could dare be seen as uninteresting as anyone in an Irving book. It wouldn't be imaginative enough.

Irving is a gifted writer, but where are the real faults of the book's two haunting phrases: "Scroor Footers" and "Kipg p'us'ng open windows." But his use of these lines is so heavy-handed and repetitive as to reduce the impact of these lines which are, however, perfectly fine. The novel is not as hot and up all at the time; Irving showed so well in Garp, the tragic and the comic are often interchangeably knotted. But the novel is written in a unlatently in misfiring and grotesquely to deliver the novel's opening message that "LIFE IS SERIOUS BUT ART IS FUN!" He need not capitalize the phrase so it will not be lost amidst the all the explaining that Irving bears in the bear suit.

We mean to trash The Hotel New Hampshire or sound unthinkably bitchy. It's well-written and, at times, exhilarating. But after I finished reading it I had this thought: for this he labored two years and 401 pages?

Marlamee Flagg

**JOHN IRVING**

**The Hotel New Hampshire**

Silence of the North

Dutton Publishers, 401 Pages; $15.50 Hardbound

This is a good movie for you who are interested in what makes a bad film. It is a made-for-TV W.H. Darcby-styled travelogue. It is a true story, an autobiography.

If an autobiography involves a life that is extraordinary you can, in some sense, foreground the interest of characters and relationships (they become secondary to plot and larger issues). If you are presenting the miscellany of life (as a focal point of history or culture, for instance), it is imperative that characters and their interactions be dynamic. The dialogue for Silence of the North is so dogged and cliched as to make all possible life out of the characters. The editing is choppy to the point that scenes clash along with no rhythm. The screenplay is so full of unresolved issues that there seems no reason for the outcome of the story. So little attention is paid to history in the setting (the events and Helen Reddy haunts at the turn of the century?) that you are constantly distracted from the dull and disjointed characters, and their tedious interactions.

I like Ellen Burstyn as an actress; she has depth and sadness I admire. She must also need some quick cash. Why else would she participate in this film. The narration is long-winded and sounds read.

Main character Tom Sherrid seems almost embarrassed by his dialogue.

The minor characters have no chance to shine. They aren't on screen long enough to participate, and don't add anything when they're on board.

I don't know where Silence was filmed, but the story takes place in the northern territories of Canada. Beautiful scenery and focus it on a beauty picture. If you are a good photographer you will enhance that beautiful setting into something transcendent. With the exception of one scene, you get beautiful pictures with nothing close to transcendent (if you keep your eyes open, you keep your eye open in the Spring thaw on the Peace River).

It's possible that the producers of Silence wanted to cash in on the cult following (u.a., Joan Baez) of the famous and influential London City of Heartland. Heartland was produced by a women's collective in Montana. It is a wonderful film with the same theme as Silence: a woman incorporating herself into the whole malaise of the western frontier. The actors are unknown (excepting Rip Torn) and the acting superb. The characters seem real, and their interactions full of life. The incessant barriers of frontier life is realistically depicted, and the editing and photography are fine. But the real payoff comes when the boys return home and open the series: "Forget about Silence of the North; save your precious pennies for Heartland.

Jim Holt

**The Treasure Valley Wind Ensemble**

Open its 1981-82 season with a concert on Veterans' Day, Wednesday, November 11, at Boise State University.

Led by BSU bands director Mel Shelton, the ensemble will perform in the BSU Music Auditorium at 7:30pm.

Included in the program will be "Symphonic Jubilee" by Jenkins, "Symphonic Folk Suite" by Reed, directed by guest conductor Robert Tourin, "Fiesta del Pacifico" by Nixon, and "Under the Double Eagle" by Wagner.

Complimentary tickets to the performance will be available from ensemble members and at the door of the performance.

The annual BSU Art Department faculty show will be Nov. 6-24 in the university Museum of Art, with a public reception for the artists Nov. 6 at 7:30pm in the museum on the ground floor of the Hotel New Hampshire Building.

The gallery and museum will be open from 9 am-8 pm Fri., and noon-5 pm Sun. See hours are: 5-10 pm Fri., noon-10 pm Sat., and noon-5 pm Sun. Admission 2.

**A Night for Tokyo**

Nov. 5-6. Little Feat, "Sailin' Shoes.

Tues., Nov. 10. The Beatles, "Revolver."

Wed., Nov. 11. J.C. "J". Cafe, "5."

**November 5 on "The Future: Towards the year 2000"**

aired each Thursday at 6:30pm Jim Scorr radio plays a Boise City regents in the year 2000. Scott Gepford is a Washington reporter trying to discover how the city became what it is. Some of the topics covered include Energy Inquiries, Traffic Flow Regulation, and The Free Lunch.

This Friday 2:00am "Abbev Road" will be played in its entirety. John Scofield will be featured.

Also, find out what's happening in the world of music with Scott Anikin feature, "In Tune."

You'll find out how much money the Rolling Stones made in L.A. and who has been chosen to play the TV version of "5."

Get up early or go to bed late and listen to KBSU each Friday morning.

Merry Mcguahan is your host for the Tuesday Evening Concert Program, four hours of classical music from centuries past as well as a sampling of the serious music of the twentieth century. You can hear anything from Beethoven to Bartok, from English Rounds and Gregorian chants to Ancient Voices and George Crumb to modern violin and flute interpretations of traditional Japanese melodies. A little bit of everything for everyone. And of course, your interest may be peaked by requests which can be called 385-3862 during the show. All requests can be made to Merry An KBSU, 1910 University Dr., 83725.

Are you concerned with the welfare of Idaho prisoners? I am. That's why I have a show each Sunday night from 7 to 9 on 930 KBCS dedicated to the prisoners at the Idaho State Correctional Institute. Start your Sunday by joining us, tune in to the show and you will hear interviews of those who work with the prisoners. I feel that contact with the outside world is a very important and a very difficult task. Yet I am the asking the public for donations of unused books for the prison library. If you have books you no longer need or use, bring them to the station and I will see that the Prison Library gets them. If you want to know more steps towards Idaho, write to me at the Corrections Institute. I am the Bicycle Commuter's Association of Idaho; if you have any questions about how to sign up for your local bike club, or Native Americans, or just want to hear good music, I write the Idaho Phoenix or to Debbie Brooks, Sunday at 10pm on KBSU.

 Interested in bicycling? If you would like to take some positive steps towards improving your local bike club, or Native Americans, or just want to hear good music, I write to the Idaho Phoenix or to Debbie Brooks, Sunday at 10pm on KBSU.
A Look at Personal Stereos
by Tom Fish

An ancient Greek philosopher once speculated that the universe was making music: the Music of the Spheres. He said that we don't notice the celestial music because we are too familiar with it. It is sort of like the Boston Pops piped into a very large supermarket and we don't notice Arthur Fiedler.

There is a "personal portable" revolution artificially re-create this universal symphony. The personal portable is a cassette or radio player with earphones for away-from-home-outside listening. Joggers, bicyclists and skiers use them.

The current craze is well supported by many followers. The light-weight cassette/radio players and "open ear" headphones are selling like hot cakes. The best known portable, the Sony Walkman, sold 50,000 units in $200 a piece last year. Projected sales for next year are in the millions. Princess Diana of Wales listens to ABBA on hers to drown out the shot-gun blasts of her husband's aristocratic hobby of hunting.

The quality of the new units is what now makes the difference. The state-of-the-art miniaturization can now deliver high fidelity sound while keeping unit size down to 4 x 1 inches and weight below a pound.

The more expensive cassette tape players feature a two-wheel drive to control wow and flutter as the unit is moved and shaken. Other features on the more expensive models include: built in microphones, Dolby noise reduction, tone and volume control, switchable equalizer, cue and review, and built-in FM radio. Some units take a FM cassette for radio play.

Stereo headphones come in two types: closed ear and open ear. Closed ear consists of a solid shell that cuts out outside noise. Open ear phones are light weight and allow outside noise in. Koss makes the best open ear phone costing $36. They have a wrap around feature to keep the headphones on the head, a common complaint.

Almost all portables come equipped with a padded pouch and a shoulder strap or belt hook. When the roving swinger buys a portable unit, he/she should check for sound distortion. At the shop, he/she should try out the unit while bouncing and jiggling the player. If there is any distortion then another model should be tried.

B.S.U. student Liz Lindsey says her Toshiba cassette player is "wonderful". "But you should have a friend at a battery factory," she adds.

Of the stereo shops surveyed, Sound Track has the largest selection ranging from a $39 Unitech AM/FM radio to a $169 KLH cassette player. Radio Shack peddles two Realistic models with $19 for a AM/FM radio to a $79 cassette player. D.J.'s City of Sound sells four models with a Sony Walkman for $220 to the new Protron 100 for about $100.

Some states are considering legislation to prohibit portable player listening while driving or riding nearly anything. Idaho does not have such a law, but the Boise police think that "impairing one of your natural senses" while driving may warrant a citation if an accident occurs.

This fall and next spring, we will probably see portables recreating the Music of the Spheres for bikers, roller-skaters, and joggers on campus.
Bunker Hill

Continued from page 1

municipal waste. The plant discovered a way to turn the sulfur dioxide waste to profit in the form of fertilizer. Since then, the emissions of sulfur dioxide have been reduced. The company has undertaken an ambitious program to revegetate 18,000 acres of the sulfur dioxide-scoured hills that encircle Kellogg.

Times like the 1930s when some laundry left out over night on a Kellogg clotheline disintegrated, are now gone. Old timers look back in 'those days' saying 'if you think its bad now, you should see when...'. But while the sulfur dioxide flames were reduced, lead emissions from the smelter's towering smokestacks were growing. According to Trees's article, the monthly averages of 8.3 metric tons of lead released from the smelter during 1955-56 increased to 11.7 metric tons from 1965 to September of 1973.

Then, in 1974, Bunker Hill had an accident—a fire broke out in the smelter's "bag house" where lead, sulfur dioxide and other metal particulates are filtered through huge vacuum cleaner-like bags before being released in the air over Kellogg. Over ten to twelve micrograms of lead measured per cubic meter of air were released off the plant site during the fire, and for six months afterwards. The Environmental Protection Agency's air lead test is 5.6 micrograms per cubic meter of air. Recently, however, Bunker Hill officials and the EPA agreed to extend the compliance deadline. That level must be met by mid 1986, according to the agreement.

Today, the lead in the air can still reach a level seven times above the national ambient air standard which officials say is safe. Not surprisingly, people began noticing high levels of lead in children's blood.

In August, 1974, a joint state and federal survey was conducted to determine the blood-lead levels (per 100 milliliters of blood) of kids in the area. As detailed in the Shoshone Project, the survey brought in doctors from the Center of Disease Control and audiologists and psychologists from the Idaho State Health and Welfare Department. They took blood samples from 1,047 children under age nine, as well as environmental samples of road dirt, vegetation, house dust, paint and pottery from homes involved in the door-to-door survey.

Twenty-two percent, or 44 children, had levels high enough to be defined as lead poisoning; more than three-fourths of those living between two and a half miles of the smelter had levels above 40 micrograms. The levels decreased with distance from the smelter.

The state study, the Shoshone Project, concluded: "We do not feel any clinical permanent impairment or illness has occurred." But, the federal doctors from the CDC working on the project do not make such a statement, concluding that children with lead levels above 40 micrograms had sustained minor nerve damage and mild anemia. The CDC doctors were financed by the federal government. The state physicians working on the project were paid in part by the State of Idaho, and by the Bunker Hill Company.

In another lead study, Dr. Herbert Needleman, a psychiatrist at the Boston Children's Hospital, measured the rings of lead in the teeth of over 2,000 children in Massachusetts over an 11 year period.

"Children in my study with high lead in their teeth were found to be more distractible, less persistent at tests, not able to work independently, less able to follow sequences of directions, were impulsive, were frustrated," he said.

Lead poisoning symptoms are discipline problems, difficulty with coordination and kidney and bladder problems.

The idea that the lead damage that could have taken place in the bodies of Kellogg children has not been either proven or disproven...so follow-up studies alone these lines have been undertaken, although in 1980, another blood survey showed that the levels of lead had declined in the children. But according to doctors who conduct testing on lead poisoning damage, neurological testing must be performed before it can be decided whether a child has suffered brain damage from the toxic metal or not.

Dr. Needleman's studies suggest that any amount of lead may be too much.

"The amounts of lead below those found in the Shoshone project and whose average mean was 51 would put children in the hospital, damage their brain. There's also data that suggests that maybe there's no threshold for lead, that if there is a threshold it's lower than that," Needleman said.

Is No News Good News?

Dean Peterson, former president of the Kellogg Chamber of Commerce, said that if Kellogg residents hold any animosity towards the company, it is not due to the legacy of a dirty environment the company is said to leave behind, but rather because Bunker is shutting down and leaving a lot of people out of work.

Peterson, who owns a funeral home in Kellogg, lead a petition drive to redeem the tainted reputation of Kellogg. The cover letter on the petition protested the "ludicrous and degrading testimony (denying the lead trials) and news accounts which have no basis in truth...many of us live here by choice, not by economic necessity." Peterson's petition collected 4,300 signatures, and was presented to Governor John Evans in Boise, September 25.

When unfurled, the petitions taped end to end, stretched from the top of the capitol steps to the street below.

Peterson believes that Bunker Hill has shown concern for the workers. In a KCTS TV program, Spokane, about lead in Kellogg kids, another family, the Huffs, pointed out that Bunker Hill had returfed Kellogg, lead a petition drive to redeem the company, it is not due to the slanderous .. and degrading testimony

The Huff family probably represents about 840 people. Children living in Smelterville have the highest lead levels in their bodies, according to the Shoshone project, since Smelterville is one of the closest residential areas to the smelter. But Terry and Donna Huff said that they don't believe the high concentrations of lead in their children's bodies may prove to be harmful.

On the KCTS TV program, the Huff's said that not even Dr. Needleman's findings on the effects of lead concentrations in children could induce them to leave Kellogg.

Terry, employed by Bunker Hill, Donna,

Rollerskating
by J. Hale

This column is for the true amateur, the bored and the curious. The amateur loves sports not for the spectacle, but for the doing. The amateur thrives on the way his/her body moves, and the variety of ways he/she can experience movement. On a most primitive level, the amateur encourages the centeredness that happens when the body moves perfectly, with grace, in response with the world around it. That's when sports are at their best (instant replay after instant replay). We're toying to explore sports for the true beginner in this column, a chance to find out about sports you might not have considered doing. For the bored and curious, more and better tricks; for the amateur, a new way to see and appreciate the body.

Let's talk about roller skating. It could be that skating is something whose vague memories you can conjure from your long gone youth. Dark, rancid roller rinks filled with greasers; or maybe the grating of metal wheels clicking over cracks in the sidewalk (scraped knees and band-aids). Come back from your sentimentality for a moment to consider roller skating for now.

The outdoor roller skating season along the greenbelt is just about over; you'll find shops open by the main post office on weekends as long as the weather continues its gentle course.

Roller skating doesn't stop when cold weather sets in: there are three indoor rinks in the area, and one on the way. Skateland features an epoxy floor (faster than wood), a $25,000 sound adventure. Roller Magic in Nampa is a brand new rink. It features an epoxy floor (faster than wood), a $25,000 sound system, light show, and the most up to date wheels and bearings available. Roller Magic is quickly becoming a favorite of young kids, but certainly not an intolerable brand new rink. In the area, and one on the way. Skateland, 6333 Overland; 343-1244 for specific times and prices.

Roller Magic, 2929 Klein Lane, Nampa; 1/2 mile from Karcher Mall; 466-6486 for specific times; $2.50/hr for individuals, $1.75/hr for families and organized groups.

Rollerdrome, 19 10th Ave South, Nampa; 466-9005 for specific times and prices.

Skating is also a great form of exercise. Roller skating doesn't stop when cold weather sets in: there are three indoor rinks in the area, and one on the way. Skateland features an epoxy floor (faster than wood), a $25,000 sound adventure. Roller Magic in Nampa is a brand new rink. It features an epoxy floor (faster than wood), a $25,000 sound system, light show, and the most up to date wheels and bearings available. Roller Magic is quickly becoming a favorite of young kids, but certainly not an intolerable brand new rink. In the area, and one on the way. Skateland, 6333 Overland; 343-1244 for specific times and prices.

Wheel R. Fun, 13th & the Greenbelt; $1.50/hr, 11:30-5:30 weekends.

Phoebe & the People

by Jay Lynch & Gary Whitney

Buy a lemon and don't know what to do about it?

Trouble with your landlord? Need legal help and don't have a lawyer? Beata isn't up on all the avenues for consumer protection. Well, the Boise Primer drummed up lots of consumer groups, agencies, and manuals to help you when you're stuck at the crossroads and don't know what to do. The Primer's consumer coverage will span two issues, so dig into part one and begin learning the tools of preventative consumerism. "An ounce of prevention can save a pound of aggravation."

Idaho Citizen's Coalition, 216 N. 8th, 346-6672, a private, non-profit corporation that provides many services to senior citizens. "Everyone's in bed with everybody else, if you know what I mean," I said. "Ever since Bud Rowly burned us in Trench heck, I've been in touch with him. The world's gotten real dusty since then, you know?"

Goo's eyebrows raised; his eyes went from glazid to intent. "Did you say us, Sherlock? Then you're not alone!"

"Just me, myself, and I," I replied. "Looks like I outnumber you guys."

"You're quite a gift for a man with his hands tied behind his back. We'll see how amusing you are after you've cooked down."

Ben Goo turned and walked out of the room. His big friend followed, slamming the door and leaving me in darkness.

... ... ...

I lay on the floor for hours. I managed to work my hands free from the rope that bound them, and began crawling along the floor. I found a half book on the floor, and by their light I began crawling along the floor. I found a half book...
DEPARTMENT OF HEALTH, PHYSICAL EDUCATION & RECREATION ANNOUNCES

the Total Fitness Center
LIFETIME ACTIVITIES FOR YOU !!!

Human Performance Lab

The BSU Human Performance Lab will soon be open!

The Lab offers a comprehensive physical fitness testing program including:

- Measures of Flexibility
- Body Composition
- Strength and Cardiorespiratory Fitness

Results are processed by a computer print-out with a detailed fitness profile for each individual.

Also available: Skill & Movement Analysis

Computer Generated Biomechanical Analysis
