We Knew This Would Happen

Nearly two million newly married couples will be setting up homes of their own in 1952. They will need electricity for the many services that make life comfortable and pleasant. They'll have it, too. Business-managed electric light and power companies plan things that way.

The Snake river valley is a good example of this kind of planning—planning for the future. Idaho Power Company has built six new power plants since 1946, thus increasing its capacity to serve you by nearly four times.

There's plenty of electricity to make new homes comfortable and convenient . . . and for new industries providing opportunities for our young people.

IDAHO POWER
Electricity... Does So MUCH Costs So LITTLE!

Something in Common...

We of Morrison-Knudsen Company, Inc., have something in common with the 1952 graduates of Boise Junior College.

We constantly face new challenges. Each new day brings fresh problems as we strive — at home and overseas — to tame the wild rivers, build the bastions of defense, and fashion the structures of commerce and industry.

Our raw materials in this job of building a better America, and a better world, are steel and concrete and timber and earth. Whether we succeed or fail depends upon how well we put these raw materials to work to meet the challenges.

The 1952 graduates of Boise Junior College also face stern challenges. They step from the classroom into a world that is sharply divided. It will be their job to resolve differences in ideas, to mediate the quarrels of nations, to bring order out of chaos.

Their raw materials are the skills and wisdom and ambition and bright hope bestowed by the classroom. Like us, they will succeed or fail depending upon how well they use the raw materials at hand.

We have faith in the youth of America, and in the American system of education. We believe they will succeed.
